SUMMARY

Data Analyst currently interning at Jambudweep Shodh Kendra, analyzing multi-year electoral data with trend analysis and statistical testing. Final-year B.Tech Computer Engineering student (CGPA 8.45) who turns large datasets into business insights using SQL (CTEs, window functions), Python, Excel and Power BI. Delivered a cohort retention analysis on 540K+ transactions that pinpointed the main churn window and revenue risk, and built KPI dashboards for sales performance reporting.

SKILLS

SQL: CTEs, Window Functions, Subqueries, JOINS, Aggregations (MySQL, PostgreSQL)

Analysis: Data Cleaning, EDA, Cohort Analysis, Trend Analysis, KPI Definition, A/B Testing, Hypothesis Testing (chi-square, t-test), Correlation Analysis, Regression

Visualization & Reporting: Power BI (DAX, Data Modeling, Drill-through), Tableau Public, Excel, Google Sheets, Stakeholder Reporting

Python: Pandas, NumPy, statsmodels, Matplotlib, Seaborn, Scikit-learn, Jupyter

Data Modeling & Tools: Star Schema, GitHub, VS Code

EXPERIENCE

Data Analyst Intern — Jambudweep Shodh Kendra Pvt Ltd

Aug 2026 – Present

- Analyze multi-year electoral datasets across constituency, Lok Sabha and Rajya Sabha elections to identify voting-pattern shifts and long-term trends.
- Clean and structure raw election data, then build Excel trend visualizations and summary reports for decision-makers.
- Validate predicted trends against historical results with statistical correlation tests, improving the reliability of reported insights.

PROJECTS

Customer Churn & Cohort Retention Analysis | SQL, Python, Power BI, statsmodels | [GitHub](#)

- Analyzed 540K+ transactions with SQL (CTEs, window functions) to build acquisition cohorts and monthly retention curves; identified Month 3 as the critical churn window and the primary revenue risk.
- Validated churn signals across cohorts with chi-square and t-tests before recommending action.
- Quantified revenue at risk per cohort and modeled recovery potential, giving a data-backed business case for reallocating retention campaign spend.

Sales Performance KPI Dashboard | Power BI, DAX, Data Modeling | [GitHub](#)

- Built a multi-page Power BI dashboard tracking sales across 4 regions and 3 product categories, with drill-through by category, region and time period.
- Wrote DAX measures for dynamic KPIs (MoM growth, rolling averages, rep rankings) to support self-serve reporting.
- Surfaced discount-leakage patterns linked to an estimated 8–12% margin erosion and recommended pricing controls.

Credit Card Fraud Detection | Python, XGBoost, SHAP, FastAPI | [Live Demo](#) · [GitHub](#)

- Analyzed 284K transactions (<1% fraud) and built a fraud model reaching 87.5% recall at a 0.15% false-alarm rate; estimated £5,338 in prevented losses versus no detection.
- Used SHAP to identify the top 5 behavioral risk drivers and translated them into candidate rules for alerting.

EDUCATION

B.Tech, Computer Engineering — ABES Engineering College (AKTU)

2023 – 2027

CGPA: 8.45 | Coursework: Probability & Statistics, DBMS, Machine Learning, Data Structures & Algorithms, Operating Systems

ACHIEVEMENTS & CERTIFICATIONS

- Certifications: SQL & SQL for Data Analytics; IBM SkillsBuild Data Fundamentals; Master Regression & Prediction with Pandas and Python; Data Science and Machine Learning Fundamentals.
- 2nd Place, ECell Eureka Competition Zonals (IIT Bombay ECell); 3rd Place, Retina AI Hackathon 2026.
- [2025 Google Solution Challenge Participant](#); [Google 5-Day Agentic AI Vibe Coding Contributor](#).
- Solved 300+ DSA problems on [LeetCode](#) and [CodeChef](#); CodeChef rating 1614 (3 Star).

LEADERSHIP & COMMUNICATION

- Growth & Content Strategist, Aasira – STEM Beyond Labels** (Jul 2024 – Feb 2026): tracked campaign KPIs in weekly dashboards and used them to lift audience engagement 35%.
- Volunteer, GDGoC** (Oct 2024 – Sep 2025): used engagement data to optimize campaigns, raising event attendance 40% and content engagement 30%.
